

STEM CLUBS

Environmental Science Club

The Environmental Science Club officers present fun facts about interesting wildlife animals, such as raccoons and squirrels. The club members listen attentively as they learn more animal facts. Afterwards, club members doodle fun drawings of the creatures talked about in the slideshow.

In the past, we have said that STEM would be the future. Now, STEM is the present.

STEM CLUBS

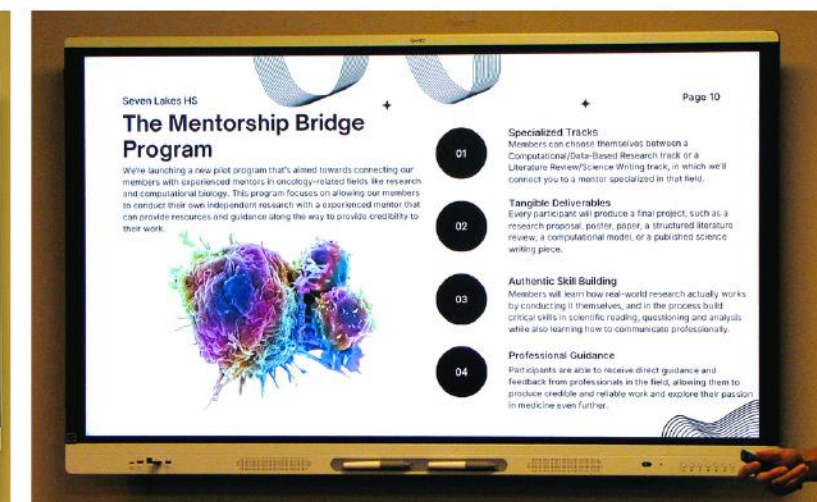

Red Cross Club

The Red Cross Club members write heartfelt cards for patients at our local hospital. They add cute drawings and supportive messages to encourage the patients during difficult times.

Cancer Research Club

The Cancer Research Society Club officers inform the club members about conducting independent research. The officers present slideshows explaining the Mentorship Bridge Program, an opportunity for passionate students to engage in hands-on scientific research with a professional.
